

CYBER RISK IS A BUSINESS PROBLEM – NOT JUST AN IT PROBLEM

Don't leave it solely to your IT Department to handle this critical risk

Cyber Security risk needs to be managed as a business problem, just like you manage insurance risk or operational risk. It can affect business disruption, legal liability, your brand and many other areas. Don't let your IT department determine how to handle this critical risk, let the cyber security risk experts at Secuvant help.

Too often, small and medium businesses fail to fully understand the threats against their sensitive data. Though it's mainly high-profile organizations, such as Home Depot, Target and JPMorgan Chase that attract the most attention when their data is compromised, the truth is that any business — of any size — can be a victim.

That's why it is so important to invest in effective information and risk security. With the average cost of a major data breach topping more than \$3.5 million, that's a risk small or medium businesses simply can't afford to take.

Managed security protection for small businesses is easier and more affordable than you think. Secuvant is a Utah technology support company that specializes in cost-effective security solutions for all your sensitive digital data. Follow the links on this page to learn more, or contact Secuvant's Salt Lake City office directly.
